

CyberVare

Cyber And IT Risk Management | Solution Brief

Evidence-Backed Cyber Risk

CyberVare gives cyber and risk teams a central workspace to assess exposure, test control effectiveness, retain evidence and maintain accountable action.

Asset-Centred Risk

Maintain asset owners, classification, value and linked risks in one shared inventory.

CIA-Based Assessment

Assess confidentiality, integrity and availability impact, then compare inherent and residual exposure.

Control Evidence

Define controls, capture supporting evidence and rate design and performance to demonstrate effectiveness.

Monitoring And Follow-Up

Track action items, treatments, control activities and due dates with clear ownership through closure.

Intelligence With Human Accountability

AiiVare prepares drafts, explanations and summaries for review. Your team retains responsibility for cyber risk decisions.

One Federated Core

CyberVare connects assets, risks, controls and evidence with the broader TransVare Suite.
